

Vibration Sensor & Alarm Units

Type 663

SIL2 Vibration Sensor with 4-20mA and Relay Outputs

This compact all-in-one vibration transmitter measures vibration frequency between 1-1000 Hz and provides both a 4-20mA analogue signal and 2x relay vibration alarms.

This makes it an extremely useful tool in machine monitoring and protection by combining all of your monitoring needs into a single field device.

Alarms points are easily set via potentiometers and each alarm has an adjustable delay to avoid raising alarms during small spikes, startup or shutdown.

Having full stainless steel IP65 enclosure, easy M12 electrical connection and SIL-2 certification makes this sensor extremely rugged, reliable and simple to use.
