Loop Powered LED & LCD Stainless Indicators

Finding a simple, clear display that is easy to install and mount in the field can be difficult, which is why we are now offering the 8080 series 4-20mA field indicators from International Metal Engineering.

These extremely robust loop-powered indicators are built from solid 316 stainless steel and are available with IEC Ex d certification for use in explosive atmospheres.

They are available with either LED or LCD digits, meaning they are well suited for both well-lit or very dark environments, and most importantly they power off your existing 4-20mA loop - there is no need for you to run additional cables to power to them.
